ATETV project

The ATETV project delivers web-based videos to connect students to careers in advanced technology.

The ATETV project delivers web-based videos to connect students to careers in advanced technology. In this episode of ATETV, industry partnerships, architectural technology, and underwater robotics are discussed. Community colleges provide hands-on education with a direct link to what is going on in industry. Such technical programs tailor their curriculum so that students gain an understanding of what is involved in working in the field. These programs are also at the forefront in emerging technologies such as remotely operated vehicles, and provide the employees of the future with a strong educational foundation. The episode can be watched in full or through the three segments: Pioneering in the Fuel Cell Industry, Advances in Architectural Technology Add Up to Green Buildings, and The Many Applications of Underwater Robotics. Running time for the full episode of this streaming video is 9:26.
